## RIGGING DEPARTMENT

### **Closing the reserve container with an RSL pin**

#### Tools:

Closing loop with Spectra 750 finger trap in the centre  
Leverage device  
Temp pin

#### Instructions:

The pull up cord needs to be about 50" long with about 6" of spectra 750 finger trapped in the centre of it.

As you can see on the far right picture, the loop is thicker and this will allow you to place the pin with less hassle.

In these pictures you can see how the thicker pull up cord makes the Cypres loop open a bit more, this facilitates the insertion of the temp pin and the RSL pin.  
Also eliminates the wear on the Cypres loop.
